Abstracts

The tower is an important element in the structure of a wind turbine. It transmits loads from the nacelle to the foundation and is a significant factor in determining profitability: the higher the tower, the higher the energy output. Depending on the specific needs of a given project, we supply different tower types.

The tubular steel tower is a proven concept that delivers short installation time, optimized logistics, and excellent cost efficiency. Steel segments with a diameter of up to six meters are stacked and joined at the construction site. Tubular steel towers can reach more than 100 meters in height.

Scope of the Report:

This report focuses on the Tubular Steel Wind Tower in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. As to the global market of wind towers, tubular steel wind towers are taking more than 95% of the market share compared with the rest taken by frame towers and concrete towers. Meanwhile in China where the landforms are quite complex, wind towers in a large power range are still needed. The biggest participators in wind energy Vestas and Siemens, just finished a great many of offshore wind farm projects in Europe over the first half of 2015, at the same time China and US added loads of wind farms with large scale wind turbines (lots offshore wind farms under construction). Moreover, the global wind power installed capacity will create a new annual record regarding the huge added amount in the first half of 2015 in China (10GW). There is no doubt the average size of wind turbines will increase faster than ever before, which may bring more challenges

and opportunities to tower manufacturers to provide more robust towers. The worldwide market for Tubular Steel Wind Tower is expected to grow at a CAGR of roughly 5.4% over the next five years, will reach 6330 million US\$ in 2023, from 4610 million US\$ in 2017, according to a new GIR (Global Info Research) study.
