The global Tubular Turbine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Tubular turbine is a new type of unit for the development of low head hydraulic resources, which is suitable for the head below 25m. This model flow channel is linear, is a kind of horizontal shaft turbine, the shape of the runner is similar to the axial flow, there are also fixed paddle and rotary paddle, because the water flow in the flow channel basically along the axial movement does not turn, so it greatly improves the water capacity and hydraulic efficiency of the unit.
