Tug Boat is a specialized vessel used to tow, push, escort, berth, unberth, and assist ships in ports, rivers, offshore areas, canals, and shipyards. It provides high maneuverability, strong bollard pull, reliable propulsion, and safe operation for harbor services, marine logistics, salvage, offshore support, and emergency response.

The industrial chain of Tug Boat covers upstream components such as marine engines, propulsion systems, steel plates, navigation equipment, hydraulic systems, winches, control systems, coatings, and safety equipment. The midstream consists of vessel design, hull construction, outfitting, propulsion integration, sea trials, inspection, and delivery. Downstream applications mainly include ports, shipyards, offshore platforms, marine towing, salvage operations, canal services, and coastal logistics.

Port expansion, offshore engineering and ship berthing/unberthing operations drive steady demand for tug boats. They provide safe power assistance for large vessel maneuvering in narrow waterways and harbors. Improved power performance and

intelligent navigation further enhance maritime operation efficiency.
