A Tumble Polisher, also known as a rock tumbler or rotary tumbler, is a machine used to polish and smooth the surfaces of various materials, such as rocks, gemstones, metals, and plastics. The process involves placing the items to be polished into a barrel or drum along with abrasive media and a liquid, typically water. The barrel is then rotated for an extended period, causing the items and the abrasive media to tumble against each other, which gradually polishes and smooths the surfaces of the items.
