The global Tunable Pulse Width Laser market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A tunable pulse width laser is a laser that can change the pulse width (duration) of its output light. Pulse width refers to the length of time that a laser emits a single pulse of light. The adjustable pulse width laser can adjust its pulse width range from nanoseconds (10⁻⁹ seconds) to milliseconds (10⁻³ seconds) according to different application requirements. Tunable pulse width lasers have many applications, such as medical, industrial, scientific research and so on. For example, adjustable pulse width lasers can be used in laser cutting, laser welding, laser marking, laser beauty and other fields. The advantage of the adjustable pulse width laser is that it can select the appropriate pulse width according to different materials and processing effects to achieve the best laser power and efficiency.
