According to our (Global Info Research) latest study, the global Tungsten Halogen Light Sources market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Tungsten halogen light sources, also known as quartz halogen or quartz iodine lamps, are a type of incandescent lamp that uses a tungsten filament enclosed in a small quartz capsule filled with a halogen gas. When the lamp is turned on, the tungsten filament heats up and emits light, while the halogen gas helps to regenerate the filament and prevent it from burning out too quickly. Tungsten halogen lamps are known for their high color temperature, which makes them ideal for applications where a bright, white light is needed, such as in stage lighting, photography, and film production.
