According to our (Global Info Research) latest study, the global Tungsten Material market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Tungsten material is a general term for products with metal tungsten as the main raw material, such as tungsten rod, tungsten wire, tungsten plate, tungsten bar, etc. They are widely used in chemical, military, national defense, medical, nuclear power and other fields due to their good thermodynamic properties. However, the high melting point and high hardness of tungsten make it very difficult to process, which leads to low product quality and limited application fields. However, since the emergence of laser powder bed fusion technology in 3D printing, tungsten components have ushered in new application opportunities.
