According to our (Global Info Research) latest study, the global Tuning Box market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A tuning box is a series of control units used to improve the performance of a vehicle. It works on the communication system between the ECU and sensing units in the engine. The control units connect to the existing wiring of the vehicle and send over-riding signals to the ECU to allow fuel injectors to inject more fuel in certain circumstances. This process allows the vehicle to produce maximum output by minimizing fuel utilization.
