## Abstracts

According to our (Global Info Research) latest study, the global Tunnel Diodes market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Tunnel diode, also known as Esaki diode, is a crystal diode with tunnel effect current as the main current component. Tunnel diodes are semiconductor diodes made of a mixture of gallium arsenide (GaAs) and gallium antimonide (GaSb) materials. The advantages are good switching characteristics, fast speed and high operating frequency; the disadvantage is poor thermal stability. Generally used in some switching circuits or high-frequency oscillation circuits.

An electrical diode is an element of semiconductor material with two terminals that, in theory, allow current to flow easily in one direction but block it in the other. A diode can be thought of as a switch that controls the flow of electrons through a circuit. In all consumer electronics categories, electronics are getting smaller and smaller. All electronics manufacturers strive to produce products that are as small as possible, use the least amount of power, and deliver the most power. Therefore, there is a growing demand for novel and unique diodes. There is a growing demand for cell phones that can perform multiple functions such as FM radio, MP3 player, MP4 player, portable TV, voice recorder, camera and even projector. As the number of signals increases, so does the need for signal routing solutions. Thanks to these ideas, handset designers will likely continue to push for smaller form factors while including improved features in their designs, which calls for smaller and better functioning diodes. Due to this technical requirement, the demand for diodes is constantly increasing. With the growing demand for electric vehicles, the diode market is expanding. A variety of diodes are used in the production of electric vehicles. The International Energy Agency (IEA) predicts that

sales of electric vehicles will reach 6.6 million in 2021, more than double the figure in 2020. In 2021, electric vehicles will account for about 9% of the global car market, more than doubling their market share from the previous year. Increasing utilization of laser diodes across a range of end-use industries is expected to drive market expansion. The use of laser diodes in the aerospace and defense industry will increase due to technological advancements. The rise of the aerospace and military industry is driving the demand for diodes, which in turn is fueled by favorable government laws that encourage the adoption of complex technologies and technological breakthroughs.
