Tunnel Lining Segment Molds are specialized forms used in the construction of precast concrete tunnel segments, which form the structural lining of tunnels. These molds are designed to shape the concrete segments to precise dimensions, ensuring they fit together seamlessly to create a continuous tunnel lining. The molds are typically made of steel or other durable materials and are often adjustable to accommodate different segment shapes and sizes. They are an essential part of tunnel construction, enabling the mass production of high-quality, uniform tunnel segments that are used in projects like subway tunnels, underground highways, and other subterranean infrastructure.
