Turbidimeter is an analytical instrument used to measure the turbidity or cloudiness of liquids by detecting light scattering or transmission caused by suspended particles. It is used for drinking water, wastewater, industrial process water, environmental monitoring, laboratory testing, food and beverage processing, pharmaceuticals, and quality control applications.

The industrial chain of Turbidimeter covers upstream light sources, photodetectors, optical lenses, cuvettes, circuit boards, sensors, pumps, housings, displays, software, and calibration standards. The midstream consists of optical design, electronic assembly, fluidic integration, software development, calibration, accuracy testing, reliability testing, and packaging. Downstream applications mainly include water utilities, environmental agencies, laboratories, industrial plants, food processing, pharmaceuticals, aquaculture, and online water quality monitoring systems.
