Turbidity transmitters are widely used in various industries and applications, including water treatment plants, wastewater treatment facilities, environmental monitoring, food and beverage production, pharmaceutical manufacturing, and research laboratories. They help ensure the quality and safety of the liquid by monitoring and controlling the level of suspended solids.

Turbidity transmitters are devices used to measure the turbidity or cloudiness of a liquid sample. Turbidity refers to the amount of suspended particles or solids present in the sample, which can affect the clarity and transparency of the liquid. Turbidity is typically measured in nephelometric turbidity units (NTU) or formazin turbidity units (FTU).
