## Abstracts

The global Turbine Airfoil market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Current aerospace trends place a strong emphasis on engine performance and fuel efficiency; and, because both performance and fuel efficiency increase with increasing internal engine gas temperatures, this creates a need for complex aerodynamic turbines operating at higher operating temperatures. Airfoil requirements. Thermal section airfoils must be able to maintain their structural integrity in environments with extreme temperatures and corrosive gases. Their manufacture requires the use of special superalloys that are resistant to high temperatures, oxidation, corrosion and stress levels. The complex shapes required for these parts can only be achieved through advanced investment casting techniques. Dimensional control must be precise.
