According to our (Global Info Research) latest study, the global Turbine Intercooler market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The turbine intercooler is a component used in a turbocharged or supercharged engine to cool the compressed air before it enters the engine intake manifold. Sometimes referred to as charge air cooler (CAC) or aftercooler. In turbocharged or supercharged engines, compressed air will become very hot, which may cause engine performance problems and potential damage due to pre-explosion. To prevent this, compressed air usually passes through the turbine intercooler, which cools it before entering the engine intake manifold.
