## Abstracts

The global Turbine Intercooler market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The turbine intercooler is a component used in a turbocharged or supercharged engine to cool the compressed air before it enters the engine intake manifold. Sometimes referred to as charge air cooler (CAC) or aftercooler. In turbocharged or supercharged engines, compressed air will become very hot, which may cause engine performance problems and potential damage due to pre-explosion. To prevent this, compressed air usually passes through the turbine intercooler, which cools it before entering the engine intake manifold.

This report studies the global Turbine Intercooler production, demand, key manufacturers, and key regions.
