The global Turbocharged Diesel Engine market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The 'Turbocharged Diesel Engine' is a type of diesel engine that uses a turbocharger to improve its performance and power output. Typically, the performance and power output of diesel engines are limited by factors such as cylinder volume and compression ratio. The turbocharger improves the performance and power of the diesel engine by converting the kinetic energy of the engine exhaust into mechanical energy, forcing more air into the cylinder to improve combustion efficiency and increase power output.
