Abstracts

Turbocharger is a type of forced induction system. Turbocharger uses the exhaust flow from the engine to spin a turbine, which in turn spins an air pump, compressing the air flowing into the engine. Turbocharger lets the engine squeeze more air into a cylinder and more air means more fuel can be added. So the engine can produce more power without increasing the engine emissions. The turbocharger has four main components, the turbine, the compressor, the control system and the bearing system.

Scope of the Report:

This report focuses on the Turbochargers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Turbochargers are useful in helping the automotive industry to meet the norms and standards regarding the emission of exhaust gasses such as CO₂, nitrous oxide, and particulate materials from the automobile. Augmentation of the engine with a turbocharger helps in addressing the increasing demand for fuel-efficient vehicles from consumers.

Major players of the turbochargers market include Borgwarner Inc., Honeywell International Inc., Mitsubishi Heavy Industries Ltd, IHI Corporation, Continental AG, and Cummins Inc. to name a few. The top 5 manufacturers occupied about 82% market share. These companies are trying to introduce new technology in the market through innovation and new product development. Apart from this, they are taking initiatives to engage themselves in partnerships and alliances in order to expand their business in emerging markets such as India and China.

The worldwide market for Turbochargers is expected to grow at a CAGR of roughly xx%
