Abstracts

The global Turbocompressor market size is expected to reach \$ 19850 million by 2029, rising at a market growth of 5.5% CAGR during the forecast period (2023-2029).

Global key players of turbocompressor include Garrett Motion, BorgWarner, MHI, IHI, Cummins, etc. The top five players hold a share about 69%. North America is the largest producer, has a share about 32%, followed by Europe and China, with share 26% and 22%, respectively. The largest market is Europe, with a share about 46%, followed by Asia-Pacific and North America, with share 33% and 15%, separately.

Turbocompressor or Turbocharger is a type of forced induction system. Turbocharger uses the exhaust flow from the engine to spin a turbine, which in turn spins an air pump, compressing the air flowing into the engine. Turbocharger lets the engine squeeze more air into a cylinder and more air means more fuel can be added. So the engine can produce more power without increasing the engine emissions. The turbocharger has four main components, the turbine, the compressor, the control system and the bearing system.
