According to our (Global Info Research) latest study, the global Turboprop Aircraft Propeller System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A turboprop engine are used for the propulsion of the aircraft propeller, it is usually a turbine engine. The Aircraft Turboprop Propeller System in contrast to a turbojet does not uses the energy from exhaust gases to create the thrust as it utilizes all the engine' power to drive the propellers.

One of the major drivers for this market is Preference for turboprop aircraft to cater to regional passenger traffic. Global air travel has changed significantly over the past decade with major improvements in associated technologies. The continuous adoption of LCCs and their increased penetration in emerging economies have made air travel more accessible. APAC has been witnessing robust growth in air travel, which is mostly driven by the rapid penetration of LCCs or the no-frills business model. India, China, and Japan are expected to register the highest increase in passenger traffic in the next 20 years, which will also reflect the induction of new generation turboprop aircraft to serve regional connectivity.
