Turf herbicides are a class of chemical agents specifically used to control weeds in turf environments such as lawns, sports fields, golf courses, and landscaping areas. They are designed to effectively prevent or suppress common weeds such as broadleaf weeds, grass weeds, and sedges without harming the grassy plants. Turf herbicides can be divided into selective herbicides and non-selective herbicides, and are divided into pre-emergence herbicides (applied before weeds germinate) and post-emergence herbicides (applied after weeds have grown) according to the timing of use. These products are usually in liquid or granular form, easy to use, and widely used in lawn environments that have high requirements for aesthetics and healthy growth, such as residential courtyards, school playgrounds, public green spaces, and lawn planting. Proper use of turf herbicides can significantly improve the overall quality and ornamental value of the lawn.
