The global Turning and Milling Center market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The turning and milling center is a multi-functional CNC machine tool that integrates turning and milling functions. It combines the functions of a lathe and a milling machine, capable of turning rotating workpieces and cutting and milling in different directions on the workpiece. This type of equipment is usually controlled by a CNC system and has multi-axis CNC capabilities, allowing the workpiece to be processed in multiple directions. Common working axes of turning and milling centers include X-axis, Y-axis and Z-axis. The movements of these axial directions enable it to achieve multi-dimensional and complex shape processing operations.

This report studies the global Turning and Milling Center production, demand, key manufacturers, and key regions.
