Turntable Blister Packing Machine is a semi-automatic or fully automatic packaging system designed to seal products within pre-formed blister cavities using a rotating turntable mechanism that enables continuous or indexed motion. This type of machine is especially suited for medium-volume production runs where space efficiency, flexibility, and affordability are priorities. The turntable configuration typically features multiple workstations around a central rotating disc—each dedicated to functions such as blister feeding, product loading, film placement, sealing, and unloading. Turntable blister machines support both PVC/Aluminum and PVC/PVC blister formats and accommodate a range of sealing technologies including heat sealing, RF sealing, or ultrasonic sealing.
