The global Twin-cylinder Small Gasoline Engine market size is expected to reach \$ 364.9 million by 2029, rising at a market growth of 1.4% CAGR during the forecast period (2023-2029).

A small engine is the general term for a wide range of small-displacement, low-powered internal combustion engines used to power lawn mowers, generators, concrete mixers and many other machines that require independent power sources. Most small engines are single-cylinder, with a few V-twin units. Although much less common, there have been small Wankel (rotary) engines manufactured for use on lawn mowers and other such equipment. A small gasoline engine typically refers to an internal combustion engine that runs on gasoline and is designed for smaller applications such as lawnmowers, chainsaws, generators. A twin-cylinder small gasoline engine refers to an internal combustion engine with two cylinders that run on gasoline.
