## Abstracts

According to our (Global Info Research) latest study, the global Twin-Screw Continuous Pulping System market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The twin-screw continuous pulping system is a piece of equipment used in the paper and textile industries to continuously stir, shear and process pulp or cellulose materials. The system consists of two screws that rotate in opposite directions. The screws are closely connected. One screw is responsible for transporting the raw materials, and the other screw is responsible for shearing and mixing the raw materials. This system can efficiently mix raw materials evenly, improving production efficiency and product quality. At the same time, the twin-screw continuous pulping system can also be adjusted according to different process requirements to meet the production needs of different products.
