Abstracts

The global Two-Axis Gimbal Camera market size is expected to reach \$ 690 million by 2032, rising at a market growth of 9.2% CAGR during the forecast period (2026-2032).

In 2025, global Two-Axis Gimbal Camera production reached approximately 52,430 units with an average global market price of around US\$ 7,000 per unit, and a gross profit margin of approximately 20%-40%. Two-Axis Gimbal Cameras are stabilized imaging systems that control camera movement along two rotational axes, typically pitch and yaw or pitch and roll. They integrate cameras, brushless motors, encoders, inertial sensors, controllers, image processors, communication interfaces, and stabilization algorithms to reduce vibration and maintain image direction during platform movement. Product types include visible-light cameras, optical zoom cameras, thermal cameras, EO/IR dual-sensor cameras, tracking cameras, and compact inspection payloads. Compared with three-axis systems, two-axis gimbal cameras generally have simpler structures, lower weight, lower power consumption, and lower costs, making them suitable for drones, robots, vehicles, boats, surveillance equipment, and portable imaging platforms. The industrial chain of Two-Axis Gimbal Cameras includes upstream CMOS sensors, thermal detectors, optical lenses, laser-ranging components, brushless motors, encoders, inertial sensors, processors, image-processing chips, bearings, aluminum or magnesium housings, PCBs, cables, connectors, and communication modules. The midstream includes optical design, mechanical structure development, stabilization-algorithm development, camera-module assembly, motor and encoder integration, sensor alignment, image processing, target-tracking software development, vibration isolation, dynamic balancing, environmental sealing, electromagnetic compatibility testing, stabilization testing, reliability validation, and final assembly. Downstream applications include drones, robots, unmanned vehicles, security monitoring, infrastructure inspection, emergency response, firefighting, agriculture,

surveying, maritime observation, and aerial photography. Related services include system integration, calibration, software customization, maintenance, repair, and technical support.
