## Abstracts

The global Two-axis Wire Rolling Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The wire hobbing machine is a multifunctional cold extrusion forming machine. The wire hobbing machine can handle threads, straight and mitre hobbing of workpieces in the cold state within its hobbing pressure range; hobbing of straight, mitre and mitre spline gears; straightening, shrinking, roller polishing and various forming hobbing. The machine has a safe and reliable electro-hydraulic actuation and control system that allows each working cycle to be selected between manual, semi-automatic and automatic modes. The wire rolling cold hobbing process is an advanced cutting-free process that effectively improves the intrinsic and surface quality of the workpiece, and the radial compressive stresses generated during processing can significantly improve the fatigue and torsional strength of the workpiece, making it an ideal process for high efficiency, energy saving and low consumption.
