Abstracts

The global Two-component Batch Blender market size is expected to reach \$ 420 million by 2029, rising at a market growth of 4.5% CAGR during the forecast period (2023-2029).

Two-component Batch Blender is a device for mixing two different component materials, which can precisely mix the two materials into a mixture of predetermined proportions. The equipment usually consists of two different storage tanks, a mixing tank and control system. During the operation, the two materials are firstly taken out of the storage tank respectively, and put into the mixing tank according to the set ratio for mixing, and finally a mixture with a predetermined ratio is obtained.
