Abstracts

The global Two-Component Epoxy Potting Adhesive market size is expected to reach \$ 633 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

Two-component epoxy potting adhesive is a formulated encapsulation material composed of resin and hardener that are mixed immediately before dispensing. It is widely used where room-temperature or moderate-temperature curing, flexible process windows, adjustable hardness, and better control over viscosity, gel time, thermal conductivity, and mechanical strength are required. In 2025, Global two-component epoxy potting adhesive sales are estimated at 53,114 tons, with an average ex-works price of 7.65 US\$/kg .

The two-component epoxy potting adhesive market is mainly driven by the need for process flexibility and high protection performance in electronic and electrical manufacturing. Compared with one-component systems, two-component products offer broader choices in room-temperature curing, adjustable pot life, viscosity matching, filler loading, and hardness design, which makes them particularly attractive for medium-volume and high-reliability applications such as sensors, transformers, power modules, ignition systems, industrial controllers, and automotive electronics. In addition, the spread of automated meter-mix-dispense equipment is improving production consistency and supporting wider adoption of two-component systems in both conventional electronics and new-energy applications.

This report studies the global Two-Component Epoxy Potting Adhesive production, demand, key manufacturers, and key regions.
