According to our (Global Info Research) latest study, the global Two-component Thermal Adhesive market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Two-component thermally conductive silica gel is used as a heat transfer medium for cooling electronic devices. It can be cured in situ into a soft elastomer and does not cause stress on electronic components. After curing, it closely adheres to its contact surface to reduce thermal resistance, which is more conducive to heat conduction between the heat source and the surrounding heat sink, motherboard, metal shell and housing.
