Abstracts

The global Two-component Thermal Adhesive market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Two-component thermally conductive silica gel is used as a heat transfer medium for cooling electronic devices. It can be cured in situ into a soft elastomer and does not cause stress on electronic components. After curing, it closely adheres to its contact surface to reduce thermal resistance, which is more conducive to heat conduction between the heat source and the surrounding heat sink, motherboard, metal shell and housing.

This report studies the global Two-component Thermal Adhesive production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Two-component Thermal Adhesive, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2023 as the base year.
