According to our (Global Info Research) latest study, the global Two-dimensional Electrophoresis market size was valued at US\$ 454 million in 2024 and is forecast to a readjusted size of USD 576 million by 2031 with a CAGR of 3.2% during review period.

Two-dimensional electrophoresis (2-DE) is a high-precision experimental instrument used for protein separation and analysis, combining isoelectric focusing (IEF) and SDS-polyacrylamide gel electrophoresis (SDS-PAGE) techniques. It first separates proteins based on their isoelectric points using IEF and then further separates them by molecular weight using SDS-PAGE, achieving high-resolution two-dimensional separation of proteins. Two-dimensional electrophoresis is widely used in proteomics research to analyze complex protein mixtures, identify protein expression differences, and study protein functions. Its high sensitivity and separation capability make it an essential tool in the life sciences field.
