According to our (Global Info Research) latest study, the global Two-Phase Immersion Cooling Fluid market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

As power demands increase, data centers are expected to move to immersion cooling systems, which can remove heat more efficiently, using less energy than air cooling. Two-phase cooling systems, from companies including Zutacore and LiquidStack increase this efficiency further, claiming to eliminate 90 percent of the energy required to cool servers in data centers.

Two-phase systems use differing amounts of coolant, and use it in different ways. For instance, LiquidStack immerses its systems in the fluid, while Zutacore floods the chips only using a direct-to-chip circulating system.
