According to our (Global Info Research) latest study, the global Two-phase SSR market size was valued at US\$ 1396 million in 2024 and is forecast to a readjusted size of USD 2192 million by 2031 with a CAGR of 7.0% during review period.

A Two-Phase SSR (Solid State Relay) is an electronic switching device used to control the power flow in two-phase AC circuits. Like a single-phase SSR, it uses semiconductor technology to switch electrical loads without mechanical parts, offering faster, more reliable, and long-lasting operation. The primary function of a Two-Phase SSR is to control the ON/OFF state of two-phase loads, often seen in systems where balanced power distribution is required. These relays can be used for controlling motors, heaters, lighting systems, and other electrical devices in two-phase environments, providing smoother and more efficient power management.
