Abstracts

According to our (Global Info Research) latest study, the global Two-Platen Injection Molding Press market size was valued at US\$ 3225 million in 2025 and is forecast to a readjusted size of US\$ 4588 million by 2032 with a CAGR of 5.2% during review period.

In 2025, the production of two-platen injection molding presses reached 17,410 units, with an estimated average selling price of US\$180,000 per unit. Two-platen injection molding presses employ a two-platen structure with a fixed platen and a moving platen. Through direct pressure clamping, a brake mechanism, and a servo hydraulic or electric/hybrid drive system, they achieve high clamping force, long mold opening stroke, and high repeatability. They are characterized by a compact structure, small footprint, large mold space, and long mold opening stroke. They are mainly used for molding plastic products, specifically including automotive bumpers, dashboards, appliance housings and internal structural parts, logistics pallets, large turnover boxes, sanitation garbage bins, and large industrial containers. The upstream sector includes castings, templates, tie rods, hydraulic components, servo motors, controllers, screw barrels, and electrical components; the midstream sector comprises complete machine design, precision machining, assembly and debugging, hydraulic and electronic control integration, and mold testing and verification; and the downstream sector includes automotive, home appliance, logistics, packaging, building materials, and industrial product companies. Gross profit margins range from approximately 20% to 40%.
