According to our (Global Info Research) latest study, the global Two-Stage Water Ring Vacuum Pump market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A two-stage water ring vacuum pump is a type of vacuum pump that operates by using water as the working fluid and the principle of a liquid ring to create a vacuum. It is designed to achieve a higher vacuum level compared to single-stage water ring vacuum pumps. The pump consists of two stages, typically arranged in series. In each stage, a impeller with blades is mounted eccentrically within a cylindrical casing. As water is introduced into the pump, it forms a rotating liquid ring inside the casing due to centrifugal force generated by the impeller.
