Abstracts

According to our (Global Info Research) latest study, the global Two-stroke Motorcycle Exhaust Pipe market size was valued at US\$ 330 million in 2025 and is forecast to a readjusted size of US\$ 508 million by 2032 with a CAGR of 6.3% during review period.

In 2025, global sales of two-stroke motorcycle exhaust pipes reached 8 million units, with an average selling price of \$40 per unit. A two-stroke motorcycle exhaust pipe is a component of the exhaust system specifically designed for two-stroke motorcycles. Its primary function is to expel exhaust gases from the engine and, through specific structural design, reduce noise, optimize exhaust flow, and improve engine efficiency. This exhaust pipe enhances engine combustion efficiency by altering the exhaust flow pattern and utilizing the principle of pulse reflection, thereby increasing power output and reducing emissions. Total production capacity was 12 million units, with a gross profit margin of approximately 25%.

The upstream of two-stroke motorcycle exhaust pipe production relies mainly on metal materials such as steel, stainless steel, and aluminum alloys, as well as high-temperature resistant coatings and sound-absorbing materials. These materials are primarily supplied by large metal manufacturers and material suppliers. Downstream demand mainly comes from global motorcycle manufacturers, the aftermarket, and parts manufacturers, particularly in the two-stroke motorcycle markets of Asia and Latin America, where demand for exhaust pipes is particularly strong.

In the future, with continuously tightening environmental regulations, two-stroke motorcycle exhaust pipes will face stricter emission standards, prompting continuous technological updates and a future development towards greater efficiency and

environmental friendliness. Furthermore, with the expansion of the global motorcycle market, especially in emerging markets, two-stroke motorcycle exhaust pipes still have significant market potential.
