## Abstracts

According to our (Global Info Research) latest study, the global Two-way Airplane Solenoid Valve market size was valued at USD 62 million in 2022 and is forecast to a readjusted size of USD 65 million by 2029 with a CAGR of 0.7% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A two-way airplane solenoid valve is an electrically operated valve that controls the flow of air or other fluids in an airplane's pneumatic system. It is typically used to control the pressure and flow of air to different parts of the aircraft, such as the brakes, landing gear, and other pneumatic components.

The two-way solenoid valve is designed to have two ports, an inlet port and an outlet port, that allow air or fluid to flow through the valve in either direction. When the valve is energized, the solenoid coil creates a magnetic field that pulls a plunger or armature inside the valve, allowing air or fluid to flow through the valve in one direction. When the valve is de-energized, a spring returns the plunger or armature to its original position, blocking the flow of air or fluid through the valve.
