The global Two-Way Handheld Transceiver market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A two-way hand-held transceiver is a radio transceiver (a radio that can both transmit and receive radio waves), which is used for bidirectional person-to-person voice communication with other users with similar radios; in contrast to a broadcast receiver, which only receives transmissions. Two-way radios transceiver usually use a half-duplex communication channel, which permits two-way communication, albeit with the limitation that only one user can transmit at a time.
