A two-way wireless walkie-talkie is a portable communication device that uses radio frequency signals to enable real-time point-to-point or point-to-multipoint voice communication. Typically operating in the VHF or UHF bands, it adopts half-duplex communication, allowing users to transmit voice by pressing a push-to-talk button and receive responses in return. The device integrates RF modules, power amplifiers, antennas, batteries, and audio systems, making it suitable for instant communication without reliance on cellular networks.

Upstream includes RF chips, power amplifiers, antenna components, battery modules, housing materials, and acoustic devices. Downstream applications cover public safety, industrial operations, commercial activities, and outdoor events. The overall industry gross margin generally ranges from 20% to 40%, with higher margins for professional-grade and digitally encrypted models.

The global production of two-way wireless walkie-talkie is projected to reach 78 million units by 2025, with an average price of \$95 per unit.
