Abstracts

According to our (Global Info Research) latest study, the global Two-Wheeler Anti-Braking System (ABS) market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An anti-lock braking system (ABS) is a safety anti-skid braking system used on aircraft and on land vehicles, such as cars, motorcycles, trucks and buses. ABS operates by preventing the wheels from locking up during braking, thereby maintaining tractive contact with the road surface.

The introduction of legislations for the installation of ABS systems is estimated to be one of the primary drivers for market growth. The Automotive Research Association of India under the Ministry of Heavy Industries and Public Enterprises made it compulsory for all the two-wheelers above 125cc to be equipped with ABS as a standard feature in 2016. Also, the Ministry of Road Transport made an announcement for all the new models of motorcycles with an engine capacity above 125cc to have ABS systems from April 2017 and existing models need to be equipped with ABS by 2018. With such mandatory regulations, the Indian government is trying to reduce the number of two-wheeler accidents in India. ABS helps avoid the wheels of the vehicle from locking and prevent skidding during hard or sudden braking. Though the ABS technology for two-wheelers is expensive and the extra fitment in two-wheelers will result in increasing the cost of bikes, the focus of the government towards the stability of the vehicle, will augment the market's growth prospects.
