The global Two-Wheeler Motorcycle market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Two-wheel motorcycle, the most common type of motorcycle, refers to a motorcycle with two wheels. In the past, two-wheeled motorcycles were popular with ordinary people for their convenience and reliability. With the development of the economy, the status of two-wheeled motorcycles was gradually replaced by cars. Two-wheel motorcycles can be divided into three types: straddle two-wheel motorcycles, underbone two-wheel motorcycles, and pedal two-wheel motorcycles. Motorcycle displacement refers to the cylinder volume of the engine, in milliliters. The number in the motorcycle model name represents the displacement, and the displacement of motorcycles can be divided into five categories: ultra-light, light, small and medium displacement, large displacement, and upgraded large displacement.

In recent years, with the widespread application of artificial intelligence and virtual augmentation technologies, some domestic and foreign companies have combined these high technologies with motorcycles to produce some black technology products. Such as pure electric Harley motorcycles, augmented reality motorcycle helmets, Samsung smart windshields, smart motorcycle gloves, BMW motorcycle smart emergency systems, etc. According to Korean media reports, Samsung has added a smart dashboard system to motorcycles through the concept product of 'Samsung Smart Windshield', so that the driver can interact with the mobile phone without leaving the car. The smart windshield can display various information, including Navigation, email, message and mobile notifications also feature SMS auto-reply. Such a high-tech application will open up a new path for the high-end motorcycle industry. It can be seen that the motorcycle industry will develop in the direction of intelligence and green in the

future.
