Abstracts

According to our (Global Info Research) latest study, the global TWS Headphone SoC market size was valued at US\$ 8051 million in 2025 and is forecast to a readjusted size of US\$ 11640 million by 2032 with a CAGR of 5.5% during review period.

In 2024, the global production of TWS Headphone SoCs reached 2.28 billion units, with an average selling price of \$3.25 per unit and a gross profit margin of approximately 40%-50%. TWS Headphone SoCs are the core hardware suite supporting true wireless stereo earphone functionality. Functionally, they can be categorized into six main types: main control Bluetooth chips, power management chips, sensor chips, audio processing chips (including active noise cancellation chips), transmission chips, and touch/voice recognition chips. TWS Headphone SoCs belong to the upstream of the TWS earphone industry. Upstream components mainly include main control chips, power management chips, memory chips, batteries, printed circuit boards/flexible circuit boards (PCBs/FPCs), and acoustic components. Among these, the main control chips, batteries, and PCBs/FPCs account for the highest cost value, each approximately 15%. Downstream companies for TWS Headphone SoCs include global mobile phone brands such as Apple, Samsung, Huawei, OPPO, and Xiaomi, as well as professional audio manufacturers including Harman, Sony, Skullcandy, Edifier, and 1MORE.

From a technological barrier perspective, intelligent audio main control chips face high technical hurdles. They need to integrate multiple functions, including audio encoding and decoding, Wi-Fi/Bluetooth connectivity, far-field and near-field acoustic algorithms, and low-power technologies. Future development trends for main control chips will primarily focus on continuously improving active noise cancellation and voice wake-up capabilities. Furthermore, high precision in manufacturing processes is also required.

Challenges: The declining unit price of TWS earphones (CAGR -5% from 2020-2025) is forcing cost reduction in power management ICs. **Opportunities:** Features such as AI noise cancellation and spatial audio increase power consumption, driving power management ICs towards higher efficiency (>95%). **Technology-driven:** Power SOC design is becoming mainstream, reducing PCB area by more than 40% and lowering BOM costs. **Fast charging demand:** Earphones needing only 10 minutes of charging for 2 hours of use are becoming standard, driving charging ICs to support fast charging rates above 3C. **Widespread wireless charging:** Improved Qi standard compatibility is driving demand for wireless charging management ICs (such as the IP6816 with Qi receiver functionality).
