Abstracts

According to our (Global Info Research) latest study, the global Type A FIBC Bags market size was valued at US\$ 2909 million in 2025 and is forecast to a readjusted size of US\$ 4054 million by 2032 with a CAGR of 4.9% during review period.

In 2025, global production of Type A FIBC bags reached 912 million units, with an estimated average selling price of US\$3.1 per unit. Type A FIBC bags are the most basic, ordinary flexible medium-sized bulk containers, also known as ordinary ton bags or ordinary container bags. They are typically composed of ordinary polypropylene (PP) woven fabric, straps, sewing thread, and inlet/outlet structures. They do not contain conductive yarn and lack anti-static or static dissipation functions, making them suitable only for non-flammable materials. The environment in which they are used should not contain flammable gases, vapors, or combustible dust. Applications are concentrated in building materials, cement, sand and gravel, minerals, fertilizers, grains, feed, plastic particles, general chemicals, agricultural products, sawdust, recycled materials, and non-hazardous dry bulk cargo logistics. The upstream of the industry chain mainly includes PP resin, PP flat yarn, UV stabilizers, masterbatches, sewing thread, straps, PE inner lining film, labels, and pallets; the midstream includes drawing, weaving, laminating, cutting, printing, sewing, inspection, and packaging; and the downstream includes agriculture, construction, mining, chemicals, food, plastics, logistics warehousing, and waste treatment industries. Gross profit margins range from approximately 18% to 28%.
