Abstracts

The global Type B Bulk Bags market size is expected to reach \$ 1126 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

In 2025, global production of Type B bulk bags reached 214 million units, with an estimated average selling price of US\$3.6 per bag. Type B bulk bags are low-breakdown-voltage bags, typically made of non-conductive polypropylene (PP) woven fabric. Unlike Type C bags, which are grounded through conductive threads, or Type D bags, which actively release charge through electrostatic dissipative fabrics, Type B bags are designed to control a low surface/material breakdown voltage in the bag material, coating, or lining system to reduce the risk of spark discharge and propagating brush discharge. Therefore, Type B bags can be used for some dry, flammable powders, but are not suitable for environments containing flammable gases, flammable solvent vapors, or highly sensitive explosive atmospheres. Applications are concentrated in the packaging of chemical powders, plastic resins, food powders, mineral powders, agrochemicals, pigments, some pharmaceutical intermediates, and dry flammable powders. The upstream of the industry chain includes PP resin, PP flat yarn, low breakdown voltage fabrics/coating materials, antistatic agents, UV stabilizers, PE inner lining film, sewing thread, straps, labels, and packaging accessories; the midstream includes drawing, weaving, coating, cutting, printing, sewing, inner lining lamination, breakdown voltage testing, and finished product testing; the downstream includes chemical, food, agrochemical, plastics, mineral, pharmaceutical, warehousing, and bulk logistics industries. Gross profit margin is approximately 20%-35%.

Regionally, the Asia-Pacific region is a major production base and important consumer market, with China, India, and Vietnam handling a large volume of manufacturing and exports. There is significant demand for packaging in the chemical, agrochemical, food

powder, plastic pellet, and mineral sectors. North America and Europe are high-value markets where customers prioritize powder safety, food/pharmaceutical compliance, UN hazardous materials packaging, supplier audits, and stable delivery. Demand in the Middle East, Latin America, and Africa primarily comes from petrochemical, fertilizer, mining, food, building materials, and agrochemical packaging. The penetration rate of Type B bags will gradually increase as safety standards improve. In the future, Type B bags will continue to be positioned as ?medium-risk, safety-upgraded? between Type A ordinary bags and Type C/D high-end electrostatic protective bags. On the one hand, they will replace some Type A bags in the packaging of ordinary chemical powders, food powders, resins, and agrochemicals. On the other hand, they will be diverted to Type C and Type D bags in environments with high explosion risks and flammable solvent vapors. Product upgrades will focus on more stable low breakdown voltage materials, low-cost testing systems, food-grade clean production, composite with inner linings, moisture-proof coatings, leak-proof sewing, lightweight high-strength PP fabrics, QR code traceability, and regionalized delivery.
