Abstracts

The global Type-C Bulk Bag market size is expected to reach \$ 2781 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

In 2025, global production of Type-C bulk bags reached 316 million units, with an estimated average selling price of US\$5.7 per bag. Type-C FIBCs are flexible, medium-sized bulk containers made by interweaving conductive yarns, filaments, or strips into a PP woven base fabric and conducting static electricity to the ground during filling, handling, and unloading through a grounding point. The key difference is that they must be grounded, unlike ordinary Type A FIBCs, Type B FIBCs with low breakdown voltage but no conductivity, and Type D static dissipation FIBCs that do not rely on external grounding. Type C is defined as being made of conductive fabric/plastic sheet or interwoven conductive wire/fiber and requires grounding during loading and unloading. Applications are concentrated in chemical powders, fine chemicals, pharmaceutical intermediates, resin plastics, pigments and dyes, metal powders, lithium battery materials, agrochemicals, food additives, and filling and unloading scenarios where there are combustible dust, flammable vapors, or solvents. The upstream of the industry chain mainly includes polypropylene resin, PP flat yarn, conductive yarn/carbon fiber/metal conductive yarn, antistatic agents, UV stabilizers, PE/aluminum foil/EVOH inner lining film, sewing thread, slings, labels, and grounding point accessories; the midstream includes drawing, circular/plain weaving, coating, cutting, sewing, conductive network connection, inner lining composite, antistatic/conductivity performance testing, and customer customization; the downstream includes chemicals, pharmaceuticals, plastics, minerals, food powders, lithium battery materials, hazardous chemical storage, and international logistics. Gross profit margin is approximately 20%-35%.

Globally, the Asia-Pacific region is a production base and a fastest-growing area. China

and India have cost advantages in PP weaving, sewing, and export. Indian companies have a high level of participation in food and chemical grade products. North America and Europe are the markets with the strongest demand for high-end products and certification requirements. The logistics of chemicals, pharmaceuticals, plastic resins, food additives, and hazardous chemicals have higher compliance requirements for electrostatic safety, grounding monitoring, IEC/ATEX/NFPA, etc., and the unit price is also higher. Demand in the Middle East, Latin America, and Africa mainly comes from the expansion of petrochemical, mining, fertilizer, agrochemical, and basic chemical production. In the future, Type-C FIBCs will upgrade from ?ordinary PP ton bags + conductive wires? to those with higher safety certifications, more stable grounding performance, more complex inner lining barriers, higher cleanliness, stronger traceability, and recyclable materials. The increasing requirements for electrostatic risk control in chemical powders, lithium battery materials, fine chemicals, and pharmaceutical intermediates will drive the increased penetration rate of Type-C bags in high-risk powder packaging. Meanwhile, European and American customers will continue to strengthen their requirements for IEC 61340-4-4, ATEX, UN hazardous packaging, food contact materials, and supply chain audits. Competition in low-end production capacity will concentrate in Asia, while higher-profit markets will focus on certified, customized, lined, and integrated packaging solutions.
