Abstracts

The global Type C FIBC Bags market size is expected to reach \$ 2781 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

In 2025, global production of Type C FIBC bags reached 316 million units, with an estimated average selling price of US\$5.7 per unit. Type C FIBC bags, also known as conductive FIBC bags or grounded ton bags, are a type of industrial packaging bag specifically designed for electrostatic hazardous environments within the Flexible Intermediate Bulk Container (FIBC) category. They are typically made primarily of polypropylene (PP) woven fabric, with interconnected conductive yarns, filaments, strips, or fabrics incorporated into the base fabric, straps, seams, or bag structure. This allows static electricity generated during filling, handling, and unloading to be conducted to the ground through a designated grounding point. This differs from ordinary Type A ton bags, Type B ton bags with low breakdown voltage but no conductivity, and Type D static dissipation ton bags that do not rely on external grounding. Type C is defined as being made of conductive fabric/plastic sheet or interwoven conductive wires/fibers, and requires grounding during loading and unloading. Applications are concentrated in chemical powders, fine chemicals, pharmaceutical intermediates, resin plastics, pigments and dyes, metal powders, lithium battery materials, agrochemicals, food additives, and filling and unloading scenarios involving combustible dust, flammable vapors, or solvents. The upstream of the industry chain mainly includes polypropylene resin, PP flat yarn, conductive yarn/carbon fiber/metal conductive yarn, antistatic agents, UV stabilizers, PE/aluminum foil/EVOH inner lining film, sewing thread, suspenders, labels, and grounding point accessories; the midstream includes drawing, circular/plain weaving, coating, cutting, sewing, conductive network connection, inner lining lamination, antistatic/conductivity performance testing, and customer customization; the downstream includes chemical, pharmaceutical, plastic, mineral,

food powder, lithium battery materials, hazardous chemical storage, and international logistics. Gross profit margin is approximately 20%-35%.
