Type C Silica Gel is a classification of silica gel, belonging to coarse-pored silica gel, with a milky white transparent or translucent appearance, and is available in block or spherical shapes. It has a large pore size (usually 5-8nm), a high specific surface area and strong adsorption capacity, and is widely used in desiccants, catalysts, industrial adsorption and other fields. The market demand for C-type silica gel is mainly supported by its unique physical and chemical properties, especially in terms of drying and moisture-proofing. According to application requirements, C-type silica gel can be modified to improve its thermal stability, chemical inertness and mechanical strength.
