Abstracts

According to our (Global Info Research) latest study, the global Type D FIBC Bags market size was valued at US\$ 493 million in 2025 and is forecast to a readjusted size of US\$ 792 million by 2032 with a CAGR of 7.1% during review period.

In 2025, global production of Type D FIBC bags reached 51 million units, with an estimated average selling price of \$9.4 per unit. The core feature of Type D FIBC bags is the use of anti-static, static dissipative, or quasi-conductive fabrics. During loading, unloading, and handling, static electricity is released in a low-energy manner, preventing flammable sparks, brush discharges, and propagating brush discharges. Grounding is not required during normal use. They are suitable for combustible powders, chemical powders that pose a dust explosion risk, pigments, resins, plastic granules, food powders, pharmaceutical powders, mineral powders, additives, and some new energy materials. However, they should not be used when the bag surface is contaminated with water, grease, or conductive dust. The upstream of the industry chain mainly includes polypropylene resin, PP flat yarn, static dissipative yarn, quasi-conductive yarn, CROHMIQ-type special base fabric, antistatic additives, UV stabilizers, PE/aluminum foil/EVOH inner lining film, straps, sewing thread, labels, and testing consumables; the midstream includes drawing, weaving, coating, cutting, sewing, inner lining lamination, static performance testing, clean packaging, and customer customization; the downstream mainly includes chemicals, pharmaceuticals, food powders, plastic resins, lithium battery materials, agrochemicals, mineral powders, and hazardous chemical logistics. Gross profit margins range from approximately 25% to 45%.
