## Abstracts

According to our (Global Info Research) latest study, the global UHF Transmitters market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Ultra high frequency (UHF) is the ITU designation for radio frequencies in the range between 300 megahertz (MHz) and 3 gigahertz (GHz), also known as the decimetre band as the wavelengths range from one meter to one tenth of a meter (one decimeter). Radio waves with frequencies above the UHF band fall into the super-high frequency (SHF) or microwave frequency range. Lower frequency signals fall into the VHF (very high frequency) or lower bands. UHF radio waves propagate mainly by line of sight; they are blocked by hills and large buildings although the transmission through building walls is strong enough for indoor reception. They are used for television broadcasting, cell phones, satellite communication including GPS, personal radio services including Wi-Fi and Bluetooth, walkie-talkies, cordless phones, and numerous other applications.

The Global Info Research report includes an overview of the development of the UHF Transmitters industry chain, the market status of Small TV Station (Low Power UHF Transmitters, Medium Power UHF Transmitters), Medium TV Station (Low Power UHF Transmitters, Medium Power UHF Transmitters), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of UHF Transmitters.

Regionally, the report analyzes the UHF Transmitters markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives and increasing consumer awareness. Asia-Pacific, particularly China, leads the global
