According to our (Global Info Research) latest study, the global U-Shaped Linear Motor market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Ironless linear motor is a new type of special motor, and the force applying component of the ironless linear motor is placed between two magnetic tracks. They are also known as U-channel motors. There is no iron core in the coil of the force applying component, which is called a coreless motor, also known as a U-shaped linear motor. Linear motor is an electric transmission device that directly converts electrical energy into linear motion mechanical energy. The copper winding of the U-shaped linear motor is enclosed and located in the air gap at the center of the two rows of magnets. Since there is no iron core inside the motor, there will be no attraction or cogging force between the force applying component and the magnetic track.
